REDCURRENT API

No matter what SaaS cyber intelligence platform or service you are currently using, consider adding our datasets for a more comprehensive analysis.

Faced with the persistent threat of all-sector cyber criminals, having as many threat intelligence datasets as possible is a cyber security necessity. To stay ahead of malicious attacks, Red Sky Alliance is committed to advancing practical and proactive resource data to our customers for addressing these cyber hazards.

REDCURRENT API (raw indicators of compromise feed) can be used for 1 to 9 amalgamated data sets.

BENEFITS
- Saves on analytical manhours, quicker analysis
- Direct access to indicators in minutes v. hours of manual collection
- Cheaper with one-year historical data compared with full 10+ years API
- Original, proprietary data sets

FEATURES
- Simple indicator-based query API
- Integration of our data with your own products and services
- One year data history

DATA SETS
There are 9 full Red Sky Alliance cybersecurity datasets in our API.

- Monitor Botnets
- Data Breach Research
- Compromised Keyloggers
- Malicious Emails Attachments
- Proprietary Sinkhole Collection
- Identifying Phishing Emails
- Source Code Secrets
- Dark Web (REDPANE)
- Paste Storage Sites

A complete description, file format and pricing for each dataset is available at https://www.redskyalliance.com/redcurrent.

REDXRAY
Features the ability for the user to create portfolios of suppliers, clients, competitors, and industry groups. Which can be enrolled and monitored on one dashboard. This means that one (1) analyst can follow a large number of organizations daily.

REDPANE OUR DARK WEB COLLECTION
REDPANE is an automatic dark web search engine that monitors over 85 dark web sites every day empowering clients with current and historical dark web content pertinent to the targeted search's subject topic.
